Abstract (en)
The skin massage apparatus has a body (1) with means (2) for forming a skin fold (3) when the apparatus is displaced on the skin. The means for forming a skin fold comprise a pressure part (4) associated with a deformable scraper (5) located behind the pressure part. Displacement of the apparatus forms a skin fold between the pressure part and the scraper. The pressure part (4) consists of a toothed wheel rotating on the body. The body has a portion forming a reservoir (8) for the treatment product with a first distribution neck (9) for the product connected to the inlet of the distributor (10). Opening and closing of the distributor is controlled by control (11) activated by the user. The distributor outlet is connected to a product distribution pipe (12) on the pressure wheel.

Abstract (fr)
Cet appareil de massage de la peau, du type comportant un corps (1) muni de moyens (2) de formation d'au moins un pli de peau (3) lors du déplacement de l'appareil sur celle-ci par un utilisateur, est caractérisé en ce que lesdits moyens de formation dudit au moins un pli comprennent au moins un organe de pression (4) associé à au moins un racloir (5) disposé à l'arrière de l'organe de pression, en considérant le sens de déplacement de l'appareil sur la peau, pour former au moins un pli de peau entre l'organe de pression et le racloir. <IMAGE>
