Abstract (en)

[origin: EP0673870A1] In the first stage (1) a band of paper wound on a roller is printed and then placed on a supply reel (2). The supply reel feeds the printed band to the third stage (3) where it is cut and folded. The sheets are then pass to a packaging machine (4) which also receives packaging from another stage (5) and a product from stage 6. The packaged product with its printed notice is finally closed or placed in a container (7). In the third stage the procedure for producing the printed notices from the paper band consists of cutting the band in the longitudinal direction. At the cut the paper is separated to form two bands of smaller transverse dimensions located side by side in the same plane. These two bands are superposed.
