Abstract (en)
[origin: EP0673876A1] The bolts (8) are positioned on the end sides (23) of the sections of telescopic bar (2-5) between the outermost and innermost section (1,6). On the inner end sides (23) of those sections (2-6), on the inside following the sections with the bolts, the bolts are positioned in stop-pieces holding the bolts in an unlocked position when the telescopic bar is contracted. Spring-loaded clamps are positioned on the outside of the end sides of the sections between the outermost and innermost sections. The separate clamps are each held by a spring-loaded locking bolt in a closed position.
