Abstract (en)

The present invention relates to a device for controlling the supplying and releasing of water for hydro-sanitary articles, in particular for bath basins or the like. The device comprises a body (2) which is provided with means for affixing to a wall (3) of a hydro-sanitary article and in the inside of which there is defined an enclosure (4) adapted to house a mixing device (5) for mixing hot and cold water which can be controlled by a control lever (6) coupled to the front end portion of the body of the device which projects from the wall of the hydro-sanitary article. The body of the device is coupled, by a portion thereof, provided to be recessed in the hydro-sanitary article, to an overflow duct (15), which can be coupled to the outlet of the hydro-sanitary article, and communicates with inlets (16) defined in that portion of the device body projecting from the wall of the hydro-sanitary article. On this portion there is moreover provided a knob (20) which is operatively coupled to means for operating the releasing plug (21) of the hydro-sanitary article. <IMAGE>
