Abstract (en)  
[origin: EP0674926A1] The board ski has several long rows (3) with a number of rollers (1). The rollers are located at pref. even relative distances, with parallel rotary axes (2). The rollers are offset relative to each other within the separate rows, and are evenly distributed within the contour (6) of the board. The length of the outer rollers varies depending upon the contour of the board edge. The free surface between neighbouring rollers is mainly not larger than the surface occupied by the rollers. <IMAGE>
