Abstract (en)

[origin: EP0675228A2] The cobble stone has an insert (1) of a different material, or has a surface which is different. The insert can be moulded into the cobble, or can be anchored (3) to it. A common anchorage can also be used for separate inserts. The insert can be introduced separately into a recess produced during the formation of the cobble. It can be poured in, set in and stuck in place, or can be set in and secured in place by a fastening. The insert can also take the form of a ring, whose inner edge is secured by a pin. <IMAGE>
