Abstract (en)

The present invention relates to a tabletop lamp or floor-lamp (1), comprising a footing (2) that is adapted to be placed on a surface to be illuminated and supports a diffuser body (4) and at least one light source. The diffuser body (4) has an elongated shape that protrudes from the footing (2) and has a lower face that is directed towards the surface to be illuminated and is provided with a surface adapted to reflect and/or refract a light beam. The light source is arranged below the diffuser body (4) in a region that is spaced from the free end of the diffuser body (4), which lies at the opposite end with respect to the footing (2); the source is orientated towards the lower face of the diffuser body (4) so as to diffuse the light beam substantially up to the free end of the diffuser body (4) and so as to indirectly project it onto the surface to be illuminated. <IMAGE>
