Abstract (en)

[origin: EP0675583A1] The base (12) of a socket is fitted to an intermediate plate (11) across the front of a wall-mounted box (10), and covered with a cap (13). The plate, base and cap constitute a pre-assembled unit for attachment to the free edge of the box. The cap has a tapered rectangular front section (39) surrounded by a shorter section (40) at an obtuse angle and a terminal collar (42) which is fitted around the box. Projections (19, 20) from the intermediate plate are pushed through openings (30, 31) in the base. <IMAGE>
