Abstract (en)

[origin: WO9509052A1] The invention relates to aluminium production plants where processing of old brasques (carbonated products resulting from the demolition of alumina electrolytic cell wall and bottom linings) calls for preliminary reduction of the brasques to small pieces of only a few millimetres in size. The grinding process disclosed involves a crushing operation (12) to reduce the old brasques to pieces no bigger than 50 mm, screening (16) for separating out particles a few millimetres in size and constituting the finished product, and grinding (14) for reducing oversize material to finished product dimensions.
