Abstract (en)
[origin: WO9414687A1] The present invention relates to conveyor belts and conveyors. The invention provides a conveyor belt (2) comprising a conveyor side (6), a reverse side (8) opposite to the conveyor side and at least one generally transverse opening (10) in the belt (2); and a support member (12, 44) separate from the belt (2), at least part (32, 46) of which support member (12, 44) projects through the opening (10) to provide a flight (14) extending from the plane of the belt (2) on the conveyor side (6) and means cooperating between the support members (12, 44) and the opening (10) to allow the support member (12, 44) to be moved to lie substantially parallel to and against the conveyor side (6) of the belt (2) whereby the support member (12, 44) can pass a tension roller (20) engaging the conveyor side (6) of the belt (2).
