Abstract (en)

[origin: WO9510731A1] The reflector device comprises an internal structure having a regular specular pyramidal shape (4), consisting in a plurality of isosceles triangles (5), so as to show at the basis of said pyramid a regular polygon shape with three or more sides (6), said triangles (5) having a sum of the vertex angles of about 256 DEG and a constant inclination of about 32 DEG with respect to the central axis (M) where the light or heat source (3) is provided, so as to produce a multipolar, not dazzling reflexion.
