Abstract (en)

[origin: EP0676129A1] An electrical garden machine, such as a lawn mower (13), is supplied with power from an household supply (11). Located in the garden is a fibreglass mast (1) that locates in a sleeve inset in the ground. The mast has a coupling at the top (5) that receives the cable (8) from the house on one side and the cable to the mower (9) on the other. The cable is of a coiled type. As the mower is moved across the garden the fibreglass mast deflects to provide ease of movement. <IMAGE>
