Abstract (en)  
The invention provides a toilet seat comprising a seating (1) and means for mounting the seat to a toilet bowl (16), wherein the mounting means are provided with mounting elements and at least one shaft hole (8) formed by a ring (7) partially interrupted at least at one position, which shaft hole co-acts with a shaft (12) for pivoting of the seating (1) relative to the mounting means, the shaft being formed by at least two fragments (13,14) of a ring with a diameter smaller than the diameter of the shaft hole, wherein at least one of the fragments is smaller than the interruption in the shaft hole and the other fragment(s) is (are) larger than or equal to the interruption in the shaft hole. At least one set of three contact points can preferably be defined between the shaft hole and the physically present part of the shaft, wherein the triangle formed by the three contact points encloses the centre of the shaft. The toilet seat can further comprise a lid (11). <IMAGE>
