Abstract (en)

A weft yarn presentation device for looms, for selectively moving one or more weft yarns from a standby position to an insertion position wherein the weft yarn is inserted inside the shed (5) by at least one weft feed gripper (5a); the device presenting at least one movable element (12)(arrow) cooperating with the weft yarn for presentation; means (18) for guiding the movable element along a predetermined path at the shed; reciprocating actuating means (25); flexible transmission means (26) for connecting the movable element (12) integral with a respective control element (27); and, for each movable element (12), a friction clutch (30) for selectively connecting a respective control element (27) integral with the actuating means (26). <IMAGE>
