Abstract (en)

The blank carrier consists of a stiffened bearer profile of steel plate in the form of an upright head U, the U-rib (5) and U-arms (6) are hold, whereby the amt. of holes in the surface is between 35 and 65%. The U-rib of the carrier profile forms an air circulatable blank accommodation surface and is so dimensioned that in the blank carrier longitudinal direction a number of blanks (2) can be placed in rows next to one another. In the profile cross-section the U-rib has a length, which corresponds approximately to the length of the wall brick blank to be accommodated. <IMAGE>

Abstract (de)

Die Erfindung betrifft einen Lochblech-Formlingsträger (1) zur luftumströmbaren Aufnahme von zu trocknenden Lochziegeln od.dgl. (2) sowie dessen Anordnung in einem Beblasungssystem. Erfindungswesentlich ist die Lochung (8, 9), welche einerseits eine ausreichende Luftzufuhr an die Formlingsunterseite ermöglicht und andererseits vor einer angeblasenen Seitenwand (6) einen Staudruck aufbaut. <IMAGE>
