Abstract (en)
[origin: EP0676641A1] The present invention provides a new analytical method that an antigen, an antibody or a nucleic acid can be assayed at a high sensitivity in the immunoassay. The present invention provides a method for assaying a substance which comprises the steps of (a) reacting an antigen, an antibody or a nucleic acid which is the substance to be measured with an antibody, an antigen or a nucleic acid to which a polyacridinium compound is bound and which can be bound to the substance to be measured, (b) carrying out a luminescence treatment, and (c) measuring the luminescent intensity of the reaction solution.
