Abstract (en)
[origin: EP0676780A1] The pushbutton electrical switch includes a slide element (14) which moves between deployed and retracted positions under the control of a pushbutton (15). There is also a selector (22) mounted on the side of the switch body. This is accessible to the user on the outside, and may be rotated between a first position allowing the slide to move, and a second position in which the slide is retained in one of its two positions. Movement of the pushbutton raises or lowers a contact bridge (18) which is able to establish connection between two fixed contacts (20) with contact pads (19). <IMAGE>
