Abstract (en)

The ski which is made of composite material has a sliding plate (1) edged with side squares (10). Along its length it carries superposed sub-assemblies (11,12,14,15) fixed to each other by a visco-elastic sheet or plate interface (16) with an inverted V section. The visco-elastic sheet is located in the median neutral fibre plane of the ski thickness. The maximum thickness of the ski is greater than 26 mm. The lower and upper sub-assemblies are made of polyurethane or one in polyurethane and the other of wood. The cores (11,12) of the sub assembly are surrounded by a fabric sheath (14,15) pre-impregnated with a thermal hardening resin, such as epoxide. The visco-elastic sheet shows through the lateral edges of the ski. The two sub assemblies and the visco elastic sheet are encompassed in a shell (13). <IMAGE>

Abstract (fr)

Ce ski est réalisé en matériau composite, et comporte une semelle de glisse (1), éventuellement bordée de carres latérales (10), et est constitué sur toute sa longueur portante de deux sous-ensembles (11,12, 14, 15) superposés, solidarisés l'un à l'autre par l'intermédiaire d'une interface constituée par une plaque ou feuille (16) en un matériau visco-élastique, collée sur toute sa longueur à chacun desdits sous-ensembles. La feuille ou plaque (16) en matériau visco-élastique est située approximativement au niveau du plan médian de l'épaisseur du ski. <IMAGE>
