Abstract (en)

The bag comprises a portion of a flattened tubular element (1) provided with smooth non apertured zones (4, 5) and alternating net zones (2, 3) and having smooth zones adjacent at least that edge (17) of the tube which forms the mouth of the bag, which has one or two transverse welds (28, 30, 33) in the zone adjacent the bag mouth, so as to define a zone bearing punched zones (22, 32) in both sides of the bag and forming an opening serving as a handle. The sides of the bag are formed with welds (18, 19) which extend from the bottom edge to the smooth top edge without reaching the mouth. <IMAGE>
