Abstract (en)
[origin: EP0677455A1] The cylindrical container (2) has a system (16,18), to form a slide/plug-in connection, at right angles to the direction of insertion, with a second similar container. The containers may roll off each other in circumferential direction, but are positively retained in radial direction. The system is formed by alternating corresponding apertures (18) and recesses (16) which lock with each other. Both are dovetail-shaped, and are positioned continuously around the circumference of the container. The complete connection system consists of an elastic material.
