Abstract (en)

[origin: EP0677465A2] The machine has spacers (10,11,23-29) which are rigidly attached on a stacking table (3). The spacers are separated in such a way that each of the differently formatted stack supports (12,30-33) lies on such a number of spacers that it is protected against tipping. The stack supports of smaller format lie on a smaller number of spacers than the supports of larger format. The spacers are in rod form made of a synthetic material and each have a longitudinal side lying on the stacking table. <IMAGE>
