Abstract (en)

[origin: EP0677978A2] The appts is provided for transmitting signals from an amplifier to a loudspeaker. It has at least one length of cable (11, 11'). The cable includes several outward leads (12, 12') for outward transmission of electric signals, and several return leads (13, 13') for return transmission of the signals. The outward leads (12, 12') are electrically connected to each other at their ends. The return leads (13, 13') are also electrically connected together at their ends. The outward and return leads (12, 12', 13, 13') are enclosed in a common ferrite cladding (2) so as to compensate any stray fields due to the close magnetic coupling of the leads. <IMAGE>
