Abstract (en)

[origin: WO9218032A1] A device at cassettes (3) for spring members (4) for a machine proposed i.a. for removing of rubber rests and ice from runways for aircrafts, at which the cassettes (3) are arranged around the periphery on a rotatable roller (1) and extending mainly in the longitudinal direction of the roller (1) and including spring members (4), such as radially projecting bristles, the ends of which are brought into contact with the ground, e.g. a runway, at the rotation of the roller (1). Each cassette (3) includes an elastic and/or plastically deformable longish bar (9), which is arranged in facing grooves (8) in brackets (2) extending along the length of the roller (1). Each spring member (4) is kept together by means of a resistant ring-shaped member (14), which surrounds a portion of each spring member (4) being depressed into the bar (9).
