Abstract (en)
[origin: EP0798805A2] The direct multi-satellite television aerial mounting includes a vertical shaft (3) which may be finely adjusted by means of a mount support (4). A yoke (6) is pivotally connected to the shaft and defines a fixed point (A) at the intersection between its axes and the shaft (3). A latitude tilt shaft (8,D) is horizontally pivotable about a point (M) on the vertical shaft (3) and is adjusted to be perpendicular to the equatorial plane. A tracking system (9) is provided with an annular dish link (B) and a dish holder (7). The support is able to direct the dish towards the geostationary orbit of the satellites.
