Abstract (en)

[origin: WO9513637A1] High frequency coaxial-type connector-switch component comprising a conductor body (10), a first contact (16), a second contact (28), and an assembly (34) translatably moveable along an axis between a first and second position. The moveable assembly comprises conducting means (36) sliding on the first contact (16) and having a moveable contact (40) which cooperates with the second contact (28) when the moveable assembly (34) is in the first position and is remote from the second contact (28) when the moveable assembly (34) is in the second position. A device (54) returns the moveable assembly (34) to its first position. The connector-switch component is for use in car radiotelephones.
