Abstract (en)

[origin: EP0678254A1] The underside of the plastics or metal holder has a clamping groove matching the cross-section of the top edge of the side frame-piece (2) of the drawer. When clamped, the holder can be moved along the side frame piece, or rail and locked in any position by means of a fastening. The holder has a pocket into which fits the rail (5) and detachably connecting the rail and holder. The end of the rail fitting into the pocket has a claw-shaped opening (8) partly gripping round the fixture bolt (9) on the holder. Next to the claw-shaped opening is a support foot (10) fitting into matching cavity (11) in the holder. <IMAGE>
