Abstract (en)
[origin: EP0678469A2] The equipment device is for bobbin grids and involves at least one unit (11) for taking over the full yarn bobbins (12) of a bobbin store onto horizontal transport spikes (13), which from an endless conveyor (14) are vertically and rotary adjustable. A bobbin carriage (15) is provided which can travel between the equipment device and the bobbin grid and has horizontal carriage spikes (16). The horizontal carriage spikes are aligned with the grid spikes of the bobbin grid in a transfer position of the bobbin carriage and are held by a carrier (18). The spike carrier is vertically limitedly adjustable by a dia. determined by the difference between the deepest possible floor distance of a horizontal transport spike of the equipment device and the floor distance of the lower-most grid spike. <IMAGE>
