Abstract (en)

The CD-holding brackets (1) are U-shaped, with a shank (3) that can be laterally opened. Projections (11) are provided in the U that are adapted to secure the CD when the U is closed, and to allow the removal thereof when the U is opened by partially rotating the CD (15) with respect to an edge. The shanks (3) of said brackets (1) are hinged in holes (39) provided on a longitudinal member (25) axially running with respect to the holding device (21) base. These shanks (3) are blocked by a side bar (33) located at a medium-high height with respect to the shank (3) and operated by levers (47) controlled by another bar (43) that can be axially moved through a key (45). <IMAGE>
