Abstract (en)

[origin: EP0678675A1] The carrier block (1) has a number of carrier elements (2, 3, 4) assembled one after the other, each supporting a respective electromagnetic multi-way valve (6, 7) and having 2 parallel channel sections (8, 9) for the flow to and from the valve and a further channel section (13) for the control medium. At least one of the carrier elements (4) is rotated through 180 degrees relative to the other carrier elements in the carrier block, so that their parallel channel sections are aligned. <IMAGE>
