Abstract (en)

[origin: EP0678706A2] The light fitting has a carrier frame (1) formed as a one-piece Al casting, with a lower part having an annular bearing surface (5) acting against the peripheral edge of the ceiling aperture and a truncated conical upper part (2) supporting the lamp socket carrier (13). The lower and upper parts of the carrier frame are coupled together via a pair of arms (3) with openings for the fixings used to secure the light fitting in the ceiling aperture. The lamp socket carrier can also be used to support a bias operating circuit (22) and termination elements (23) for a number of different lamps, on the outside of the upper part of the carrier frame. <IMAGE>
