Abstract (en)

[origin: WO9514193A1] The proposed method of reprocessing residual waste or similar material, especially finely divided residual waste, is characterized by the fact that the residual waste constituents are mixed (1) with a dry neutralising agent such as burnt lime, dried (3) at temperatures of between 100 and 150 DEG C, subjected to pyrolysis at temperatures of between 200 and 800 DEG C (4), the gases obtained during pyrolysis undergoing catalytic post-combustion (11) at temperatures of 200-400 DEG C.
