Abstract (en)
[origin: EP0679505A1] The tool (1) has at least one base body (2) and/or at least one work component (3-6) which comes in processing engagement with the material. At least one component on a work side (7) turned away from a rear side (8) has a work surface (10). At least one work component is fixable in relation to the base body and/or at least one further work component in at least two different positions. A grain direction formation (34) is imparted to the tool and at least one work component is adjustable in this direction. Pref. at least one work component with interengaging securing surfaces (13,17) is steplessly adjustable and is fixable in each position. <IMAGE>
