Abstract (en)
[origin: EP0679537A2] The pencil lead (4) has a triangular cross-section, e.g. a scalene triangle. The lead aperture (5) of the housing (2) has an opening profile, which corresponds to the lead profile. The housing consists of two parts (2a,b), which are fastened to each other via clamp sections (9a,b) on opposite ends. A peg (10) on one housing part engages clamping into a bore (11) in the top of the other part. The lead movement device (3) is located in a long aperture of the housing. It consists of an externally actuated sliding plate and an internal holder connected to it. The holder has a retainer for the lead. <IMAGE>
