Abstract (en)

The roller (1) has a rotatable element (8), which is fastened to a height-adjustable element. This consists of a spring steel sheet (13) with given bending line. The roller is displaceably born on a shaft (33). This has locking grooves (37) at defined positions. The roller has a corresponding locking mechanism (31). A peg (27) is provided to lock the roller on the shaft. The peg is pressed by a screw (26) into a notch (28) in the shaft. The turnable element also consists of a roller, which is held in two bearing plates (15). These are coupled to the spring steel sheet, and have a projection, which at the bottom projects over the diameter of the roller. <IMAGE>

Abstract (de)

Bei einer Vorrichtung zum Transport von Bogen (5) in eine Bogenverarbeitungsmaschine ist eine Taktrolle (1) vorgesehen, die fest auf einer getakteten Welle (33) angeordnet ist, wobei die Taktrolle (1) mit einstellbarem Anpreßdruck an eine Transportwalze (9) andrückbar ist und wobei die Taktrolle (1) höhenverstellbar angeordnet ist. <IMAGE>
