Abstract (en)
[origin: WO9416962A1] A plastic closure (1) is useful to close a container (19) having a mouth area (21). The closure (1) has a lid (3) associated with the container mouth (21) and linked to a ring-shaped sidewall (5). Fastening means (29) provided on the inner surface (13) of the sidewall (5) cooperate with corresponding fastening means (27) on the outer surface (23) of the container (19) and are designed for example as a screw thread. Finally, the closure has a further sealing arrangement (11) characterized by a continuous, swivelling sealing lip (9) which starts at a stop (15) and cooperates with a sidewall (25) of the container (19) which surrounds the mouth (21) of the container. The sealing lip (9) is swivelled out of a rest position, when the container is closed, and is upsettingly clamped in its sealing position between the stop and the sidewall of the container.
