Abstract (en)

[origin: US5660062A] PCT No. PCT/EP93/03717 Sec. 371 Date Sep. 5, 1995 Sec. 102(e) Date Sep. 5, 1995 PCT Filed Dec. 30, 1993 PCT Pub. No. WO94/17230 PCT Pub. Date Aug. 4, 1994The invention is directed to a process and a device for the production of textile net-like fabrics by various bonding processes, e.g., the warp knitting process or stitch bonding process. Based on the object of the invention-to provide a process and a device for carrying out the process by various bonding processes, e.g., the warp knitting process or stitch bonding process, for producing textile net-like fabrics with large mesh widths, a high variability of structure, and product widths extending beyond the working width-a plurality of adjacent groups of mesh side threads forming the mesh sides in the working direction are produced, at least one function thread (4) is joined with at least one group of mesh side threads (1), the function threads are guided out of the group of mesh side threads transversely to the working direction to form the other mesh side lying transversely to the working direction, at least one function thread (4) is formed in a loop in order to form function thread reserves, and the function thread is joined with at least one group of mesh side threads (1).
