Abstract (en)

The reinforcement grid has long bars joined to one another by cross bars. It is formed from a metal plate strip with inclinedly running cuts or slots between at least two longitudinal strips (8, 10) together with ribs (6) extending between the cuts or slots. The height of the ribs is equal to or smaller than the thickness of the brickwork seam. The thickness of the metal plate strip amounts to 2mm and more. The reinforcement grid can be rolled up and out. It has at least two rows of ribs between longitudinal strips, whereby the ribs of adjoining rows run in the same direction. <IMAGE>

Abstract (de)

Das Armierungsgitter ist aus einem mit Schrägschnitten oder -schlitzen versehenen Blechband hergestellt, in dem die zwischen den Längsstreifen (8,10) liegenden Stege (6) querverstreckt werden. Dadurch ergibt sich eine besonders einfache und preisgünstige schweissfreie Herstellung des Armierungsgitters, das durch Aufrollen einfach zu transportieren, zu lagern und auf der Baustelle ebenso einfach zu verarbeiten ist. <IMAGE>
