Abstract (en)
[origin: EP0681074A1] The installation has at least two registers (1, 2), of which one is arranged in a building room (A) on a building floor (5) over a floor breakthrough (7) and the other is in a building room (B) beneath under the breakthrough at a distance from it. Both registers in the same arrangement have guide members for vertically running, pre-assembled conduit sections (3a, 3b) or a sanitary house installation. The installation has a fixed installation plate (9) and members (20) for fixing the installation plate to the underside of the breakthrough. In the installation plate are machined holes, the layout of which corresponds to that of the conduit guides of the installation register. <IMAGE>
