Abstract (en)

[origin: EP0681075A2] A projecting area (11) of the handle, partic. the handle housing (6) extends inwardly through an opening (9) in the plate. At the area of the handle, a slide (13) is located, which is movable parallel to the plate inside and is held against an inwards movement by at least one projection arranged on the area. The external dimensions of the slide are not greater than the inner dimensions of the opening in order to be inserted with the area through the opening. The slide in the inserted state and after a displacement engages behind an inside edge area of the opening.
