Abstract (en)

[origin: EP0681084A2] The adhesive-storage container is in the form of an ampoule (17) forming at least part of the support's (12) articulated axle (18). The ampoule has a neck (19) forming the axle stub of the articulated axle mounted in the corner connector (10). The neck opens into the connecting part of the corner connector with the frame strut (15). The end of the ampoule facing the neck is held by the support and/or by the insertion arm. The support has an axle stub (21) mounted in the corner connector and which is flush with the neck of the incorporated ampoule. The support has two pressure pieces (14) holding the ampoule pincer-like between them and protruding beyond facing outer peripheral surfaces (23) of the insertion arm. <IMAGE>
