Abstract (en)

The suction/gauge unit consists of a base for fixing to one wall of the fuel tank, equipped with a suction assembly (200) with a reserve chamber (210), and a gauge assembly (300) which can slide vertically on the reserve chamber and is held elastically towards the bottom of the fuel tank. The base of the reserve chamber has a strainer which is deformable with an amplitude at least as great as that of the bottom wall of the fuel tank, against which it is held by an elastic element such as a spiral spring or moulded claw. The gauge assembly fits into a recess in the outer surface of the reserve chamber, which has a vertical slider (260) formed by a rectangular groove with converging edges and equipped with flexible teeth at one end to prevent spontaneous withdrawal of the gauge assembly. It also has a central housing (310), a lower foot (370) and an upper barrel (350). <IMAGE>

Abstract (fr)

La présente invention concerne un dispositif d'aspiration/jaugeage de carburant pour véhicule automobile comprenant une embase conçue pour être fixée sur une paroi d'un réservoir de carburant et qui porte un ensemble d'aspiration (200) pourvu d'un bol de réserve (210) et un ensemble de jaugeage (300), caractérisé par le fait que l'ensemble de jaugeage (300) est monté à coulissement dans une direction générale verticale sur le bol de réserve (210) et sollicité élastiquement vers le fond du réservoir par rapport à ce bol. <IMAGE>
