Abstract (en)
[origin: EP0681149A2] Support for radiating panels, comprising a ground resting foot (11) having, in an upward region, means (17,22) for fixing to the radiating panel (16). The fixing means comprise a supporting base (17) for the radiating panel (16) and at least two mutually opposite levers (22) pivoted on the base (17) in a transverse position, so as to fit between the elements (18) of the panel. The force application region (23) of each lever (22) is associated with pusher means (26,27) rigidly coupled to the base (17) and the resistance application region (24) of each lever (22) is located outwardly so as to rest against a corresponding one of the elements (18) of the radiating panel (16). <IMAGE>
