Abstract (en)

The system comprises at least one belt (9, 10) to be worn by a person and having a buckle (10) carrying a radio transmitter device (51) and arranged to activate the transmitter device as a result of a variation in the circumference of that part of the body encircled by the belt (9, 10); means (60) are also provided to receive and process the signals emitted by the transmitter device (51) and to provide an alarm indication following the receipt of a predetermined signal combination. <IMAGE>
