Abstract (en)  
[origin: EP0681346A2] The electric plug has double-locking for contact parts. The plug has an outer (2) and an inner (3) housing part. These parts (2, 3) are movable relative to each other, perpendicular to the plugging-in direction (K) of a contact part (6). A contact part (6) is locked to the or with the inner housing part (3) when the housing parts (2, 3) are assembled. When the housing parts (2, 3) are moved towards each other into a locking position, the contact part (6) locks with the outer part (3). To establish the assembly position, the inner housing part (2) is moved in a direction (S) which is oriented perpendicular to the direction (T) for establishing the locking position. <IMAGE>
