Abstract (en)
[origin: EP0681800A1] The base rail (2), pivot lever (3) and support lever (4) are made of U-shaped cross-sectioned profiles. The pivot lever is narrower than the base rail and is mounted between the side arms (2a) of the base rail. The support lever is narrower than the pivot lever, and is mounted between the pivot levers side arms (3a). The open side of the pivot lever can be moved into the base rail to include the support lever. The free ends of the base rail have facing arms (2b) which secure the guide part (5) inside the base rail. The pivot lever is pivotally connected to the base rail by a link bolt which has a head, flange and wider part. The support lever has an extra support lug punched out of its middle arm, in addition to its front, bottom end. <IMAGE>
