Abstract (en)
[origin: EP0681890A1] Each upright (11,12) has a pair of support feet (26,27) aligned crosswise to the lengthwise direction of the basic body (17). Each support foot has a foot part (28) one end of which is linked to the upright and the other end of which is linked to one end of a support part (29). The other end of the support part not attached to the foot part is linked to a guide part (31). The axes of the pivot links (33,34,35) are horizontal and parallel with the basic body. The guide part can be adjusted in height between a non-operating and operating position and locked in that position on the upright. <IMAGE>
