Abstract (en)

[origin: EP0682179A1] The valve has a valve longitudinal axis, a movable valve closure body, a nozzle body, which has a valve seat working in conjunction with the valve closure body, and at least one injection aperture downstream of the valve seat. In a trough of the basic body is formed an insertable insert part. This insert part is arranged with an inner opening as injection space downstream of the at least one injection aperture. In a face side (83) of the insert part (52) facing the trough (80) of the basic body (51) at least one gas feed channel (84) is arranged, which is limited by the basic body and runs from the outer periphery of the insert part as far as the injection space (77). <IMAGE>
