Abstract (en)

[origin: EP0682209A2] The lamp has the raster secured by attachment devices, each having an anchoring part (8) secured to the lamp housing, with an opening receiving a carrier (5), coupled to a holding element for the reflector of the light raster. The carrier is displaced between an upper position in which it is secured to the anchoring part and a lower position in which the raster is removable. Each holding element has a bearing hole in which the bottom end of the carrier is located, for pivoting about a horizontal axis, with a spring blade extending in the insertion direction of the carrier, secured to the anchoring part at its bottom end. <IMAGE>
