Abstract (en)
[origin: EP0682212A1] The device includes a body (1) with its front panel having printed a parameter scale (3) and a time scale (7). A rotating disc (2) can select any combination of parameter values displayed on the scale. Auxiliary parameter values corresponding to each selection are displayed using the same switch on a mobile scale (5b). A rotary switch (4) enables selection of the required time interval. The disc movement is transmitted to the mobile scale via a belt (10). The mobile scale is attached to a wheel (5d) actuated by a second wheel 911). The temperature value can be adjusted using a thermostat (8). <IMAGE>
