Abstract (en)
[origin: EP0682335A2] The device comprises several vibration bodies formed as lamellas (4) arranged parallel and next to one another. The lamellas are elongated and their length is greater than or at least equal to their width. They are of one-piece construction so that a one-piece arrangement is formed with a number of individual vibrating lamellas. The lamellas are arranged in a housing (2) and between the upper and/or under side of the housing and the lamellas a lighter free space is provided, within which a vibratory movement of the lamellas is carried out.
